Stream Gauging Station Index

This index lists the historic (closed) and current (open) stream gauging stations managed by the Department of Natural Resources and Mines (the department).

A list of current, operational gauging stations is detailed in the Stream Gauging Station Network document. Please also refer to the Stream Gauging Station Network list for a summary of the background and objectives of department's streamflow monitoring network. Data collected from the Stream Gauging Station Network is available for download through the department's [Water Monitoring Data Portal](#), where near real time and historical data has been available to the public online since January 2008. Information about water quality data collection at departmental stream gauging stations is detailed in the Surfacewater Ambient Network (water quality) document, this is also available for download through the department's [Water Monitoring Data Portal](#).

Description of the table

This document lists operational gauging stations in alphabetical and numerical orders. Please note that this document does not include client sites managed by the department. Table header descriptions for this index are detailed below:

- **Station:** denotes the gauging station number. The gauging station numbering system is based on Australian Water Resource Council drainage basin numbering comprised of six (6) numbers and one (1) letter
- **Stream name:** the name of the stream the gauging station is situated on
- **Location:** the locality details of the gauging station
- **Office:**
 - Ayr (**AYR**) – Bundaberg (**BBG**) – Rockhampton (**RCK**)
 - Brisbane (**BNE**) – Innisfail (**INF**) – Toowoomba (**TBA**)
 - Mareeba (**MBA**) – Mackay (**MKY**)
- **Latitude** (°S) and **Longitude** (°E) details are given in degrees to 5 decimal places, although accuracy to this level (5 decimal places = 1 metre) is not guaranteed. The datum type is a mixture of AGD66 and GDA94.
- **AMTD:** the Adopted Middle Thread Distance, in kilometres. This relates to the distance along the middle of the river upstream from it's mouth (or junction).

- **Catchment area:** area of the catchment above the gauging station, in square kilometres
- **Gauge zero:** zero point on the river height gauge, in meters
- **Datum:** refers to vertical elevation standards:
 - Australian Height Datum (**AHD**) – Assumed Datum (**ASS**) – Brisbane City Council Datum (**BCC**)
 - Burdekin River Datum (**BRD**) – Mount Isa Mines Datum (**MIM**) – No Applicable Data (**NAD**)
 - State Datum (**SD**)
- **Commenced:** the date the gauging station opened
- **Ceased:** the date the gauging station closed
- **Station type** refers to the time series data type:
 - **G** indicates a gauging station where time series flow data are collected at the gauging station
 - **GQ** indicates both time series flow and water quality data are collected at the gauging station
- **Height data / Flow data / Rainfall data / TS WQ data:** indicates the data available at a gauging station (e.g. stream height, stream discharge, pluvio data and time series water quality data).

Queensland drainage basins

The below table provides the Australian Water Resource Council drainage basin numbering for Queensland's drainage basins. This system is used in numbering departmental stream gauging stations.
