

METADATA STATEMENT	
Acknowledgement	These data were collected for the Commonwealth Environmental Water Office by a large number of organisations, institutions, jurisdictions and other stakeholders working collaboratively on the Long Term Intervention Monitoring Project. We acknowledge the First Nations peoples as the Traditional Owners and Custodians of the lands, waterways and skies of the Murray-Darling Basin. We thank them for their knowledge and science, and respect their continuing connection to culture and Country and the values reflected in these data.
Name of dataset or data source	Long-Term Intervention Monitoring (LTIM) Project data - Stream Metabolism and Water Quality
Custodian of the dataset or data source	Shane Brooks (LTIM Data Manager)
Publisher/Agency	Commonwealth Environmental Water Office (CEWO), Department of Climate Change, Energy, the Environment and Water
Description	<p>The CEWO's LTIM Project examined the contribution of Commonwealth environmental water to the environmental objectives of the <i>Basin Plan 2012</i> (Basin Plan) and assisted the CEWO to demonstrate environmental outcomes and adaptively manage the water holdings. Monitoring and evaluation was focused in seven Selected Areas: the Junction of the Warrego and Darling rivers, Gwydir river system, Lachlan river system, Murrumbidgee river system, Edward/Kolety-Wakool river system, Goulburn River and Lower Murray River. These areas will continue to be monitored through the CEWO's Monitoring, Evaluation and Research (MER) Program.</p> <p>Data collected by monitoring at Selected Areas is used to evaluate local outcomes from watering and also contributed to the analysis and evaluation of Basin Plan objectives.</p> <p>The Stream Metabolism and Water Quality Basin Matter seeks to evaluate the influence of Commonwealth environmental water on two key ecological processes—primary production and decomposition—which have a profound effect on ecosystem character and condition.</p> <p>Stream metabolism data was collected over the duration of the LTIM Project from 2014-15 to 2018-19 in six Selected Areas* (Edward/Kolety-Wakool, Lachlan, Goulburn, Murrumbidgee, Warrego-Darling and Lower Murray).</p> <p>*Stream metabolism is not a Category 1 indicator in the Gwydir Selected Area.</p> <p>Please refer to the <i>Murray-Darling Basin LTIM Project: 2018-19 Basin-scale evaluation of Commonwealth environmental water – Stream Metabolism and Water Quality</i> Report for the detailed method on data used for evaluation.</p>
Quality	The LTIM Project Data Standards (link below) for Stream Metabolism and Water Quality have been designed to provide data appropriate for the evaluation of water quality outcomes at the Basin scale. This data may be complemented by a range of existing data sets.

Data inputs	Data used that contributed to the evaluation of Stream Metabolism and Water Quality include: <u>LTIM Selected Area monitoring data</u>
Type	Dataset (excel)
Version	Final
Time period	2014-2019
