

MBA Report 23 – metadata to upload with data release on data.gov.au

HEADINGS	RESPONSES
Title	Measuring Broadband Australia Report 23 Dataset Release
Description	<p>The Measuring Broadband Australia (MBA) program relies on households across Australia volunteering to receive a Whitebox that tests the performance of their fixed-line broadband services. Thousands of tests are run and these measurements are used to calculate average speeds achieved and other metrics for different volunteer groups, such as volunteers on the NBN fixed-line services and volunteers on NBN fixed wireless services.</p> <p>The summary data released includes test results for all Whiteboxes used in MBA Report 23 for download, upload, latency and outages metrics. The results are de-identified to protect the privacy of the volunteers and the integrity of the MBA program.</p>
Keywords	Fixed-line broadband services, fixed wireless broadband services, download speeds, upload speeds, latency, Australian Consumer and Competition Commission, Measuring Broadband Australia.
