ASIC Register Download – Help File

Contributor: Asher Brooks

Version: 1.1

Getting Started

1. Purpose

ASIC successfully made its Company register extract available to the public via data.gov.au on the 3 September 2014. This document is to provide detailed context and understanding of the files uploaded to Data.gov.au by ASIC each month.

2. Company Register

Select data from the ASIC's Company Register will be uploaded each month to www.data.gov.au. The data made available will be a snapshot of the register at a point in time. Legislation prescribes the type of information ASIC is allowed to disclose to the public

The company register dataset contains the following:

- Select fields that are publically available (see data dictionary for field details);
- All currently registered companies that are able to be upload to data.gov.au;
- Deregistered companies for the past year; and
- Historical name data for registered companies.

2.1. File Format

The company dataset is provided in a file with the extension of CSV (comma separated values) and MDB (Microsoft Database File).

Important note: The data contained within the company register csv is **not** separated by commas

The company register csv uses the 'TAB' character as the delimiter (value separator) between values in the dataset; the 'TAB' character is used in place of a comma separator because company names can contain commas in their name and therefor is not a suitable delimiter for this dataset.

ASIC Register Download – Help File

Contributor: Asher Brooks

Version: 1.1

An example of the data in the company register csv is as follows

Company Name	ACN	TYPE	CLASS	SUB CLASS	STATUS
ABC, XYZ	012345678	APTY	LMSH	PROP	REGD
ABC, XYZ	012345678	APTY	LMSH	PROP	REGD
ABC, XYZ	012345678	APTY	LMSH	PROP	REGD
ABC, XYZ	012345678	APTY	LMSH	PROP	REGD

2.2. File interaction

The company register data set contains approximately 2.6 million records. Because of the number of records contained in the file, common programs used to view data from CSV's (MS Excel, notepad, etc.) will not work

Example: Most versions of MS Excel limits the number of rows to approximately 1 million rows, which means that if that dataset is viewed in Excel, less than half of the actual number of records will be available.

It is recommended users interact with the dataset on data.gov.au via one of the following methods:

- Dataset Preview on data.gov.au;
- Access resource data via a web API with powerful query support (We API information can be found in the [main CKAN Data API and DataStore documentation](#)); or
- Import csv into an appropriate database (MS Access, Oracle, etc).

A step-by-step data import guide to importing Company data into MS Access can be found in the appendix of this help file. ([APPENDIX ITEM 1](#))

2.3. Dataset Fields

The Company dataset contains the following fields:

- Company Name
- Australian Company Number (ACN)
- Type
- Class

ASIC Register Download – Help File

Contributor: Asher Brooks

Version: 1.1

- Sub Class
- Status
- Date of Registration
- Previous State of Registration (where applicable)
- State Registration Number (where applicable)
- Modified since last report – flag to indicate if data has been modified since last report
- Current Name Indicator
- Australian Business Number (ABN)
- Current Name
- Current Name Start Date

A comprehensive description of each field in the dataset is provided in the attached data dictionary ([APPENDIX ITEM 2](#)).

3. ASIC Connect

An alternative to searching the data contained in the Company Register extract is to use [ASIC Connect](#).

ASIC Connect is our online service for interacting with ASIC's registers.

We have three services currently available through ASIC Connect:

- Business names;
- Self-managed superannuation fund (SMSF) auditors; and
- Search - companies, business names, SMSF auditors and other registers.

You can view both free and paid information about entities such as companies, business name holders and SMSF auditors, check names availability, and purchase register extracts and documents online.

4. Contact

Any further enquiries can be directed to ASIC via email at Access.Request@asic.gov.au

APPENDIX ITEM 1

Company Register - MS Access Import Guide

Use the following steps to import csv data into a new MS Access database; similar steps can be used to update an existing database:

Steps are provided using MS Access 2010

1. Download CSV dataset file;
2. Create blank database in MS Access;
3. Select 'Text File' from the Import & Link section of the External Data tab;

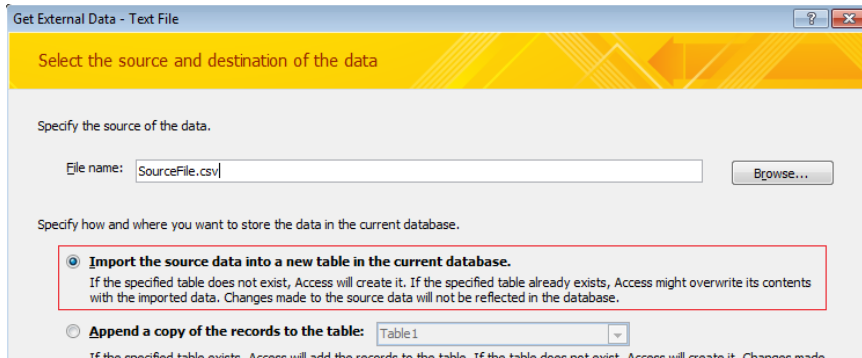

4. Browse to the CSV dataset file and choose to import into a new table and select 'Next';

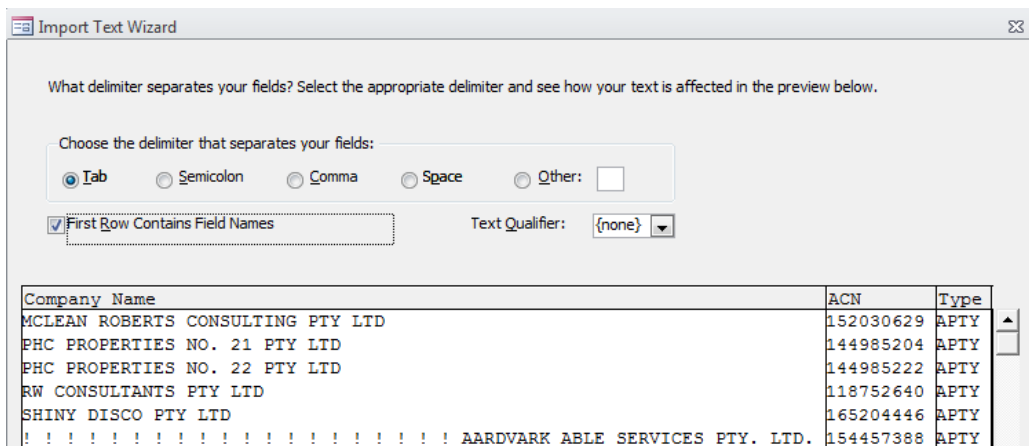

ASIC Register Download – Help File

Contributor: Asher Brooks

Version: 1.1

5. Select Delimited format and select 'Next';
6. Choose the 'Tab' delimiter for your fields, and check the box indicating the first row contains Field Names. Select 'Next';

7. Select Next to accept field names as is;
8. Decide on how a primary key option (this may decision may change depending on use), select 'Next';
9. Give the table a name and select 'Finish'.
